

## Bugs report

This document provides description about the bugs found during the testcase execution. For evidence in each bug, please check the individual folder with bug id.

Web Site: <https://code-leap-network.vercel.app/>

Title: The username field has no size restriction	Bug Id: CLN-01
Feature: Access	
TestCase Ref: Validate fields size limitation	
Steps to reproduce the bug:  <ol style="list-style-type: none"><li>1. Access the Access page</li><li>2. Enter a user name with more than 250 characters</li><li>3. Click on the Button "ENTER"</li></ol>	
Actual result: No validation for the field size allowing users with more than 250 characters to register in the system	
Expected result: Definition of a size, validation for this definition and a message indicating that the field has a size limitation	

Title: Username without size restriction causing internal error	Bug Id: CLN-02
Feature: Access	
TestCase Ref: Validate fields size limitation	
Steps to reproduce the bug:  <ol style="list-style-type: none"><li>1. Access the Access page</li><li>2. Enter a user name with more than 250 characters</li><li>3. Click on the Button "ENTER"</li><li>4. Input information for the Fields Title and Content</li><li>5. Click on the Button "CREATE"</li></ol>	
Actual result: The lack of validation for the size of the field username is causing internal error When trying to create a post	
Expected result: System does not allow user to be created after size limitation validation	

Title: Username without size restriction causing internal error	Bug Id: CLN-03
Feature: Access	
TestCase Ref: Validate fields size limitation	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the Access page</li> <li>2. Enter a user name with more than 250 characters</li> <li>3. Click on the Button "ENTER"</li> <li>4. Input information for the Fields Title and Content</li> <li>5. Click on the Button "CREATE"</li> </ol>	
Actual result: The lack of validation for the size of the field username is causing internal error When trying to create a post	
Expected result: System does not allow user to be created after size limitation validation	

Title: Username without size restriction causing bad elements alignment	Bug Id: CLN-04
Feature: Access	
TestCase Ref: Validate fields size limitation	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the Access page</li> <li>2. Enter a user name with 200-215 characters</li> <li>3. Click on the Button "ENTER"</li> <li>4. Actual result: The lack of validation for the size of the field username is causing bad alignment for the username label after create a post. After the post is created and listed below, the label username is not aligned inside the main box	
Expected result: System does not allow user to be created after size limitation validation	

Title: The username field has validation for blank spaces	Bug Id: CLN-05
Feature: Access	
TestCase Ref: Validate blank spaces in mandatory fields	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the Access page</li> <li>2. Enter blank Spaces in the username field to enable the "ENTER" Button</li> <li>3. Click on the Button "ENTER"</li> </ol>	
Actual result: No validation for blank spaces allowing users with no information to register in the system	
Expected result: Include in the mandatory Fields validation, verification for blank Spaces in the field username, not allowing users to be created without information	

Title: Username without validation for blank spaces causing internal error	Bug Id: CLN-06
Feature: Access	
TestCase Ref: Validate fields size limitation	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the Access page</li> <li>2. Enter blank Spaces in the username Fields to enable the "ENTER" Button</li> <li>3. Click on the Button "ENTER"</li> <li>4. Input information fot the Fields Title and Content</li> <li>5. Click on the Button "CREATE"</li> </ol>	
Actual result: The lack of validation for blank Spaces in the field username is causing internal error when trying to create a post	
Expected result: System does not allow user to be created after blank spaces validation	

Title: Title without size restriction causing internal error	Bug Id: CLN-07
Feature: Create	
TestCase Ref: Validate fields size limitation	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the homepage</li> <li>2. Enter information for the Title field with more than 250 characters</li> <li>3. Click on the Button "CREATE"</li> </ol>	
Actual result: The lack of validation for the size of the field title is causing internal error When trying to create a post	
Expected result: System does not allow post to be created after size limitation validation	

Title: Title without size restriction causing bad elements alignment	Bug Id: CLN-08
Feature: Create	
TestCase Ref: Validate fields size limitation	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the homepage</li> <li>2. Enter information for the Title field with 200-215 characters</li> <li>3. Click on the Button "CREATE"</li> </ol>	
Actual result: The lack of validation for the size of the field title is causing bad alignment for the title label after create a post. After the post is created and listed bellow, the label title is not aligned inside the main box.	
Expected result: System does not allow post to be created after size limitation validation	

Title: Post mandatory Fields without validation for blank spaces causing internal error	Bug Id: CLN-09
Feature: Create	
TestCase Ref: Validate blank spaces in mandatory fields	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the Homepage.</li> <li>2. Enter blank spaces in the title and content fields to enable the "CREATE" Button.</li> <li>3. Click on the Button "CREATE".</li> </ol>	
Actual result: The lack of validation for blank Spaces in mandatory fields for post creation is causing internal error when trying to create a post	
Expected result: Include in the mandatory fields validation, verification for blank spaces in the fields, not allowing posts to be created without information	

Title: Title without size restriction causing internal error	Bug Id: CLN-10
Feature: Update	
TestCase Ref: Validate fields size limitation	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the homepage</li> <li>2. Find a post</li> <li>3. Click on the edit button</li> <li>4. Enter information for the Title field with more than 250 characters</li> <li>5. Click on the Button "SAVE"</li> </ol>	
Actual result: The lack of validation for the size of the field title is causing internal error When trying to update a post	
Expected result: System does not allow post to be updated after size limitation validation	

Title: Post mandatory Fields without validation for blank spaces causing internal error	Bug Id: CLN-11
Feature: Update	
TestCase Ref: Validate blank spaces in mandatory fields	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the Homepage.</li> <li>2. Find a post</li> <li>3. Click on the edit button</li> <li>4. Enter blank spaces in the title and content fields to enable the "SAVE" Button.</li> <li>5. Click on the Button "SAVE".</li> </ol>	
Actual result: The lack of validation for blank spaces in mandatory fields for post update is causing internal error when trying to update a post	
Expected result: Include in the mandatory fields validation, verification for blank spaces in the fields, not allowing posts to be updated without information	

Title: No button to cancel update	Bug Id: CLN-12
Feature: Update	
TestCase Ref: Cancel update	
Steps to reproduce the bug: <ol style="list-style-type: none"> <li>1. Access the Homepage.</li> <li>2. Find a post</li> <li>3. Click on the edit button</li> <li>4. Enter information for the Fields Title and Content.</li> <li>5. Search for a "CANCEL" Button to leave the edit page</li> </ol>
